

INTERNAL CAPABILITY BRIEFING

The Awareness Toolkit

One in-house, AI-powered platform that lets any team member create professional, fully-branded security-awareness content for any client — in minutes.

Deployed on our network · Accounts for the whole team · Configurable to any sector

THE PROBLEM TODAY

Awareness content is slow, costly and inconsistent

- ◆ **Every client & project needs bespoke content** — posters, training, quizzes, briefings — built largely from scratch each time.
- ◆ **It is slow:** days of design and copywriting per asset; specialist tools and skills required.
- ◆ **It is expensive:** external agencies, per-seat SaaS subscriptions, stock licences.
- ◆ **It is inconsistent:** branding, tone and quality drift between people and projects.
- ◆ **It does not scale:** hard to serve many clients and sectors at once.

THE SOLUTION

A single, in-house "one-stop shop" for awareness content

An AI-powered platform, **hosted on our own network**, where every team member has an account and can self-serve. Pick a tool, a topic and a client — get a polished, on-brand asset back in minutes. No agencies. No per-seat fees. Your data stays in-house.

Self-hosted

Team accounts

Any sector

White-label per client

Minutes, not days

WHAT IT PRODUCES

Fifteen formats — one platform

**Posters & explainers**

A4 poster + one-page explainer

**Quizzes & Spot-the-Phish**

Participant + facilitator key

**Tabletop exercises**

Scenario, roles, injects, debrief

**Micro-tips & lock-screens**

Printable tips + screen cards

**Teachable moments**

News-triggered "what to do" notes

**Interactive e-learning**

Narrated HTML + SCORM, scored

**Completion certificates**

Branded diploma PDFs

**Awareness magazine**

Designed multi-page edition

**Learning dashboard**

Read → learn → certify portal

**Campaign calendars**

12-month plan + calendar feed

**Video scripts & storyboards**

Scene-by-scene shooting docs

**Digital-signage slides**

1920×1080 screen packs

**Comic books**

Any art style, consistent characters

**KPI reports**

Client awareness metrics

**Intelligence briefings**

Weekly cyber / sector magazines

FLAGSHIP — END-TO-END TRAINING

Learning Hub: read → learn → certify

- ◆ One run produces a **branded awareness magazine** and an **interactive e-learning course built from that edition**.
- ◆ A **local learning dashboard** shows each publication, tracks completion and a **30-day deadline**.
- ◆ Staff get a personal **certificate library** of their progress.
- ◆ E-learning is **narrated, scored and SCORM-ready** for any LMS.

"Publish the magazine, auto-generate the training, prove completion — all in one place."

FLAGSHIP — ENGAGING FORMATS

Cinematic e-learning & comic books

- ◆ **Comic books on any topic** in a chosen art style — cartoon, anime, realistic, watercolour, noir and more.
- ◆ Generates **character & place "anchor" images** and reuses them so the cast stays **consistent across every panel**.
- ◆ E-learning uses **AI illustration, voice-over narration** and animated UI for genuinely engaging modules.
- ◆ Memorable content drives **better retention** than slideware.
- ◆ Differentiates our awareness offering to clients.
- ◆ Produced in minutes — no illustrators or studios.

CONFIGURABLE

One toolkit, every client and sector

- ◆ **Topic-agnostic:** finance, healthcare, energy, government, defence, retail — any subject, any audience.
- ◆ **White-label per client:** set one value and every asset carries that client's brand.
- ◆ **Audience-aware:** tailor tone for staff, executives, new joiners, children.
- ◆ **Provider-flexible:** local AI by default, or premium models — a config switch, not a rebuild.
- ◆ **Extensible:** new tools and sector "products" are added as plug-in modules.
- ◆ **Consistent house style** across everything the team ships.

DEPLOYMENT MODEL

Runs on our network — nothing leaves the building

PEOPLE & ACCESS

Accounts for the team — self-serve, on any project

- ◆ **Every team member gets a login** on the platform.
- ◆ **Self-service:** open a tool, choose topic + client, submit, receive the asset — no specialist skills.
- ◆ Three ways to work: a **web form**, a **Telegram command**, or the **dashboard**.
- ◆ **Any project, any client:** the same toolkit serves the whole company.
- ◆ Outputs land in a **shared library** for reuse and oversight.
- ◆ **No per-seat licence cost** — add people freely.

HOW IT WORKS

Request → AI → branded asset, in four steps

1

Request

Pick a tool, topic, client & options
on a form or in chat

2

Generate

AI writes the content (local or
premium model)

3

Design

Auto-rendered into a polished, on-
brand layout / PDF / SCORM /
images

4

Deliver

Returned in chat and saved to the
shared library & dashboard

Switching the AI or image provider is a configuration change — not a redevelopment.

BUILT TO LAST

Enterprise-grade by design

**Secure by default**

Self-hosted; no secrets stored in code; your data stays on your network.

**Private AI option**

Local model means sensitive client content never leaves the building.

**Modular & extensible**

New tools and sector products added without re-engineering the core.

**Reproducible**

Whole stack is declared as code; stand it up with one installer.

**Observable & recoverable**

Health checks, status, logging and full backup / restore.

**Documented**

Operations and developer guides ship alongside the platform.

THE BUSINESS CASE

Faster, cheaper, consistent — at scale

Minutes

to produce an asset (vs days)

£0

per-seat & agency fees — self-hosted

15+

content formats from one platform

Any

sector & client, fully branded

- ◆ **Speed & capacity:** the team ships more, for more clients, with the same headcount.
- ◆ **Cost:** replaces agencies, stock licences and per-seat SaaS.
- ◆ **Consistency & brand control** across everything we deliver.
- ◆ **New revenue:** a credible "awareness-as-a-service" offering for clients.

ROLLOUT

A low-risk, phased rollout

PHASE 1

Deploy

Stand up on our network; create team accounts; set house branding.

PHASE 2

Enable

Onboard the team; build per-sector topic templates; pilot on 1–2 clients.

PHASE 3

Scale

Roll out across projects; offer client dashboards; track adoption & KPIs.

STATUS

This is built and running — not a concept

- ◆ The full toolkit, the Learning Hub, the comic generator and the dashboard are **implemented and deployable today**.
- ◆ Runs on a standard Docker host; a single installer brings up the stack.
- ◆ Local-first AI works **offline**; premium models optional.
- ◆ Ready for a pilot on a real client this month.

THE ASK

Approve a pilot

- ◆ A **server on our network** to host the platform.
- ◆ **Accounts for the team** to start self-serving content.
- ◆ One or two **pilot clients** to prove the value in 30 days.

One in-house platform · every awareness format · any client · minutes not days.
